

How to connect via HDMI

1

Turn on the **main power**.

2

Select "先生PC".

4

Connect the HDMI cable labeled **先生 PC** to the computer.

続します。

- ① Touch **操作**
- ② Lower screen. (下降)
- ③ Turn on the projector.
- ④ Touch **送出停止中**

If you do not tap 「送信停止中」, it will not appear on the screen.

M201 projectors (Same for screens.)

M301 projectors (Same for screens.)

終了時

Doing 終了 in 一斉 will turn off the projector and roll up the screen. The main power is turned off last.

HDMI outputs audio as well as video. The audio comes from the classroom speakers.
If the connected device does not recognize HDMI properly, sound may not be output. Try VGA + audio mini-pin instead.

What to do when there is no sound

Is the volume on your computer or software muted?

Turn up the volume on your computer and software whenever possible.

Unplug and plug the HDMI cable to see if it improves.

Is the "volume" on the control panel turned down low? Try adjusting the volume.

If you cannot find the problem anywhere and there is no sound, try restarting the computer or other equipment.

If the screen does not appear on the projector

Windows

[Windows]+[P] to display the screen below. Make sure it is a duplicate (複製).

Mac

Try setting the display resolution to full HD.

Full HD : 1920 × 1080

If only the desktop is displayed, try checking the Mirroring checkbox.
