Institute for Excellence in Higher Education Center for Career Support & Innovative Leaders Platform Program in Emergent Innovation Campus public lecture

Intellectual property: patents are especially increasing in importance in recent years. The rights acquisition of new inventions and originality of the research are very important to a researcher.

Patents to help specify the new technology correctly are essential. This holds true for both technology systems and the humanities (social sciences).

This will be a university public lecture in three sessions featuring the instruction of 3 professionals in respective positions at a university, company, and patent office, speaking from their actual experience.

This is the first time for this to be offered.

Do you really know what a patent is? Can you write a patent?
